<tr><td></td><td></td><td>be able to: establish a connection between the facts and bring them into the system, apply physical knowledge to solve practical problems, use models of physical phenomena of applied problems of the future specialty; to analyze the influence of physical phenomena on the modes of operation of modern technology</td></tr>
<tr><td>13.</td><td>Assessment system according to each task for passing the exam</td><td>The first semester
To assess the student's work during the first semester, the final rating O_{sem} is calculated as the sum of grades for different types of classes and control activities, which include practical classes, laboratory work, individual calculation task and modular testing.
Second semester
The form of final control is a combined exam. With this type of control, the final grade is calculated by the formula $P_n = 0{,}6 \cdot O_{sem} + 0{,}4 \cdot O_{ex}$:, where O_{sem} - grade for the semester in a 100-point system, O_{ex} - grade for the exam in a 100-point system.
The final grade P_n is translated into national and ECTS according to the scale:
